ICTFOOTPRINT EU

European Framework Initiative for Energy & Environmental Efficiency in the ICT Sector

Webinar: New GHG ICT Sector Guidance, SAT-S Ready to Use & Data Centers Standards

In partnership with:

Tuesday, 27th June 2017

Sustainability for London
Your Future In Your Hands

Speakers

Alex Bardell

Member of Executive Board
Sustainability for London

Silvana Muscella

Founder & CEO
Trust-IT Services
ICTFOOTPRINT.eu Coordinator

Andie Stephens

Senior Customer & Project Manager
Carbon Trust

The ICTFOOTPRINT.eu initiative -In a nutshell

Mission

Become “THE” consolidated effort that, at European level, raises awareness on metrics, methodologies & best practices in measuring the energy and environmental efficiency of the ICT-sector, to facilitate their broad deployment & uptake.

Stakeholders

ICT Intensive SME

ICT Suppliers

Cities & Public Administration

Standard Development
Organisations

Helping you choose your Low Carbon & Energy Efficiency in ICT

Main Outputs for our stakeholders

ictfootprint.eu

Marketplace

Buyer: Find sustainable ICT suppliers & publish ICT sustainable needs.
Seller: publish ICT sustainable services or procurements & search for clients.

Webinars

Know more on sustainable ICT: get practical guides from a highly qualified experts in the Sustainable ICT sector and learn how to apply them in your organisation.

Help Desk

In 5 languages

Get support about how to decrease your carbon footprint & implement ICT energy efficiency standards with Online Assistance (EN, FR, ES, DE, IT).

Success Stories

Best practices in Sustainable ICT. Search how players like you got energy savings & carbon footprint reduction. Or even showcase your success story!

Self Assessment Centre

Measure your own carbon footprint and start learning how to become sustainable thanks to ICT standards & methodologies. **AVAILABLE SOON**

Join us and get energy savings by choosing low carbon ICT

A lush green forest scene with a stream flowing over rocks in the foreground. Sunlight filters through the trees, creating a warm, golden glow. The background is slightly blurred, emphasizing the foreground elements.

European Framework Initiative for Energy & Environmental Efficiency in the ICT Sector

Data Centre Standards - The EU landscape

Alex Bardell

Member of Executive Board at Sustainability for London

Tuesday, 27th June 2017

Sustainability for London
Your Future In Your Hands

Agenda – Presenter – Alex Bardell

- Introduction
- Data Centre Standards, standards and guidelines
- Confusion?
- ISO Standards
- EN Standards
- EURECA “Magnificent 7”
- Summary

Introduction

Alex Bardell – SFL Executive Board Member

DATA CENTRE STANDARDS, STANDARDS AND GUIDELINES

What are Standards, standards and guidelines?

- Standards are created by International Standards Organisations supported by National Standards Bodies.

OR

- Created by National Standards bodies supported by National Governments
- In the EU, the Regional Standards Organisation recognised by the EU Bodies is
 - CEN/CENELEC/ETSI
 - CEN – European Committee for Standardization
 - CENELEC – European Committee for Electrotechnical Standardisation
 - ETSI – European Telecommunications Standards Institute

What are Standards, standards and guidelines?

- National Bodies (Countries) such as BSI (UK) NEN (NL) DIN (GER) can also create standards for use within own country
- Although other countries can adopt another countries standard if they so wish
- Examples
 - BS, NEN & DIN
- Regional standards (CEN/CENELEC/ETSI) are designated as follows
 - BS EN 50600-1:2012
 - NEN EN 50600-1:2012
 - DIN EN 50600-1:2012

What are Standards, standards and guidelines?

Standards can be created by anybody.

- Private companies

- NGO's

Guidelines can be created by anybody.

What are Standards, standards and guidelines?

Confusion
?

- US Standards (ANSI)
 - TIA 942/568
 - BICSI 002
- Uptime Institute
 - Tier Topology
- Green Grid Data Centre Maturity Model
- EU Code of Conduct for Data Centres (Energy Efficiency)
- XX EN 50600 Series

What are Standards, standards and guidelines?

ISO's

- ISO 9001 :2015
- ISO 14001:2015
- ISO 22301:2013
- ISO 27001: 2013
- ISO 50001:2013

What are Standards, standards and guidelines?

EN's

- XX EN 50600-1:2012 General concepts
- XX EN 50600-2-1:2014 Building Construction
- XX EN 50600 2-2:2014 Power distribution
- XX EN 50600 2-3:2014 Environmental control
- XX EN 50600 2-4 :2015 Telecommunications
Cabling systems
- XX EN 50600 2-5:2016 Security systems
- XX EN 50600 3-1:2016 Management and
operational

What are Standards, standards and guidelines?

Others

- EMAS ICT Sector
- Lot 9

What are Standards, standards and guidelines?

Magnificent
“7”

- ISO 9001 :2015
- ISO 14001:2015
- ISO 22301:2013
- ISO 27001: 2013
- ISO 50001:2013
- EUCOC Participant
- XX EN50600 Series

What are Standards, standards and guidelines?

Summary

- We're in **EUROPE**, adopt International or EU Standards
- ISO's
- XX EN50600 Series
- EN Code of Conduct for Data Centres (Energy efficiency)
- EMAS

Thank you for your attention

European Framework Initiative for Energy & Environmental Efficiency in the ICT Sector

Self-Assessment Tool for Carbon Footprint of ICT Services: SAT-S Ready to use

Silvana Muscella

Founder/CEO of Trust-IT Services & Project
Coordinator of ICTFOOTPRINT.eu

Tuesday, 27th June 2017

Green ICT – what is it ?

How green is IT?

"The global information and communications technology (ICT) industry accounts for approximately 2 percent of global CO2 emissions, a figure equivalent to aviation" - Gartner 2007

<http://www.greenict.org.uk/what-is-green-ict>

**Manufacturing one PC requires
1.7 tonnes of raw
materials and water and
consumes over 10 times its
own weight in fossil fuels**

<http://archive.unu.edu/zef/publications-d/flyer.pdf>

What is Green ICT about?

- How materials in ICT equipment are mined/produced
- Conditions in which they are manufactured and energy in this process
- Transport to consumers
- Energy required in their usage
- Disposal of ICT equipment at EoL

**With a decrease of emissions
of just 15%, it can generate
savings of €600 billion by
2020**

<http://newsroom.unfccc.int/unfccc-newsroom/ict-sector-helping-to-tackle-climate-change/>

**ICTFOOTPRINT.eu: to raise awareness and
provide practical tools for ICT carbon footprint measurement & reduction**

The Complex Scenario of Carbon Footprint Measurement in ICT

Map of ICT Standards

Goods

GHG Protocol

GHG Protocol Cloud Computing Data Centers

How do I use this methodology? Ask for support!

		ETSI 103 199: Environmental Engineering (EE); Life Cycle Assessment (LCA) of ICT equipment, networks and services; General methodology and common requirements	
Name of Initiative/Methodology		Environmental Engineering (EE); Life Cycle Assessment (LCA) of ICT equipment, networks and services; General methodology and common requirements	
Link to the latest published version		ETSI TS 103 199 (11/2011): Version 1.1.1 ts_103199v010101p.pdf	
Developed by		The European Telecommunications Standards Institute (ETSI)	
History and Status		<ul style="list-style-type: none"> Work started in 2008 and finished in 2011 Published in November 2011 	
Involved companies / parties		<ul style="list-style-type: none"> Huawei Technologies Co. Ltd. Telecom Italia Nokia Siemens Networks France Telecom 	
Scope		<ul style="list-style-type: none"> Organisation env. accounting Scope 1 Scope 2 Scope 3 	<ul style="list-style-type: none"> Product env. assessment Life cycle approach Use phase only
		<ul style="list-style-type: none"> GWP Energy (focus on secondary energy) 	<ul style="list-style-type: none"> Other environmental impacts KPIs

Considering the number of methodologies & standards, ICTFOOTPRINT.eu developed a first practical tool for approaching the measurement of carbon footprint of ICT Services

SAT-S – Simple, Free & Easy-to-Use

What we ask from you
Only 5 min of your time

What you get in return
Personalised Report
about your ICT Service

SAT-S is ready to use and provide you a personalised report showing the approximate climate change & primary energy footprint of your ICT service over one year

<https://ictfootprint.eu/en/self-assessment-tool>

Goals of the SAT-S

Goals/intended applications	Applications not intended
<ul style="list-style-type: none"> - Awareness raising - Identification of environmental hotspots of products / services - Simplified Key Environmental Performance Indicator (KEPI)* <p>* Type of LCA</p>	<ul style="list-style-type: none"> - Detailed ecodesign / continuous improvement - Environmental communication through Environmental Product Declarations (EPDs) - Corporate or site environmental reporting - Monitoring of environmental impacts

**SAT-S: a simplified tool for awareness raising
on the impacts of ICT services/products**

Answer Questions, Get Results, Understand, Take Action

9 + 12 Simple self-explanatory questions

Formal checks & captivating user-experience

3

How many hours in a year is the service used?

Example: 3 people performing video conferences in business days (no weekends) for 2 hours a day are: 1566 hours a year.

40

hours

4

Indicate the average amount of data exchanged in a year of use of the service.

700

GB

This value is required

5

Select the type of device most used by the end-user to access the ICT service

- ☐ Laptop
- ☐ Tablet
- ☐ Smartphone
- ☐ Desktop

The amount of time spent on the service is used to calculate the impact from the use stage. Moreover, only part of the impact of the production and end-of-life stages is considered. This share is determined based on time spent on the service and the total lifespan of the device.

Insights into how the info will be used for ICT FOOTPRINT calculation

Customised, downloadable PDF report at the end of the questionnaire

Self-Assessment Tool for ICT Services (SAT-S): simple, free, on-line

The Founding Model of SAT-S

●● User interface

- Simple guided questionnaire with examples
- If you are interested: “behind the scenes” insight about calculation is provided

●● The Engine

- Automatic calculation of carbon footprint and energy footprint
- Simplified Life Cycle Assessment loosely based on standard methodologies (GHG and ETSI)

●● Report on ICT service footprint

- Climate change and primary energy values and graphs organised in life cycle steps and in building blocks
- Intuitive equivalents are presented (e.g. emissions of an average car travelling for 1 Km) to trigger more interest and take action

Raise awareness on ICT footprint & calculation methodologies

SAT-S is Fast, free, on-line

Conclusions

- ICT needs Energy Efficiency interventions
- Methodologies available to calculate ICT carbon footprint

ICTfootprint.eu is the European Initiative to raise awareness and develop a community with all relevant stakeholders

Practical tool for ICT-intensive organisations to position their ICT services footprint

<https://ictfootprint.eu/en/self-assessment-tool>

From SAT-S to SAT-O (Self-Assessment for Organisations)

More useful & holistic tool, with more complex calculations while keeping the interface, questions and results simple

European Framework Initiative for Energy & Environmental Efficiency in the ICT Sector

ICT Sector Guidance for the GHG Protocol Product Standard

Andie Stephens

Senior Customer & Project Manager at Carbon Trust

Tuesday, 27th June 2017

**ICT Sector Guidance
built on the
GHG Protocol Product Life Cycle Accounting
and Reporting Standard**

**Chapter 1:
Introduction and General Principles**

This Guidance has been reviewed for conformance with the GHG Protocol Product Standard.

Development of GHG Protocol Standards

GHG Protocol Standards

GHG Protocol Sector Guidance

- Builds upon the overarching methodology to provide more specificity for a sector
- Created by a group of stakeholders convened to build consensus on guidance for performing a product GHG inventory within the sector
- Sector Guidance:
 - **Aerospace**
 - **Agriculture**
 - **Chemicals**
 - **Concrete**
 - **Construction**
 - **Logistics**
 - **Pharmaceuticals**
 - **Public Sector**
 - **Waste**

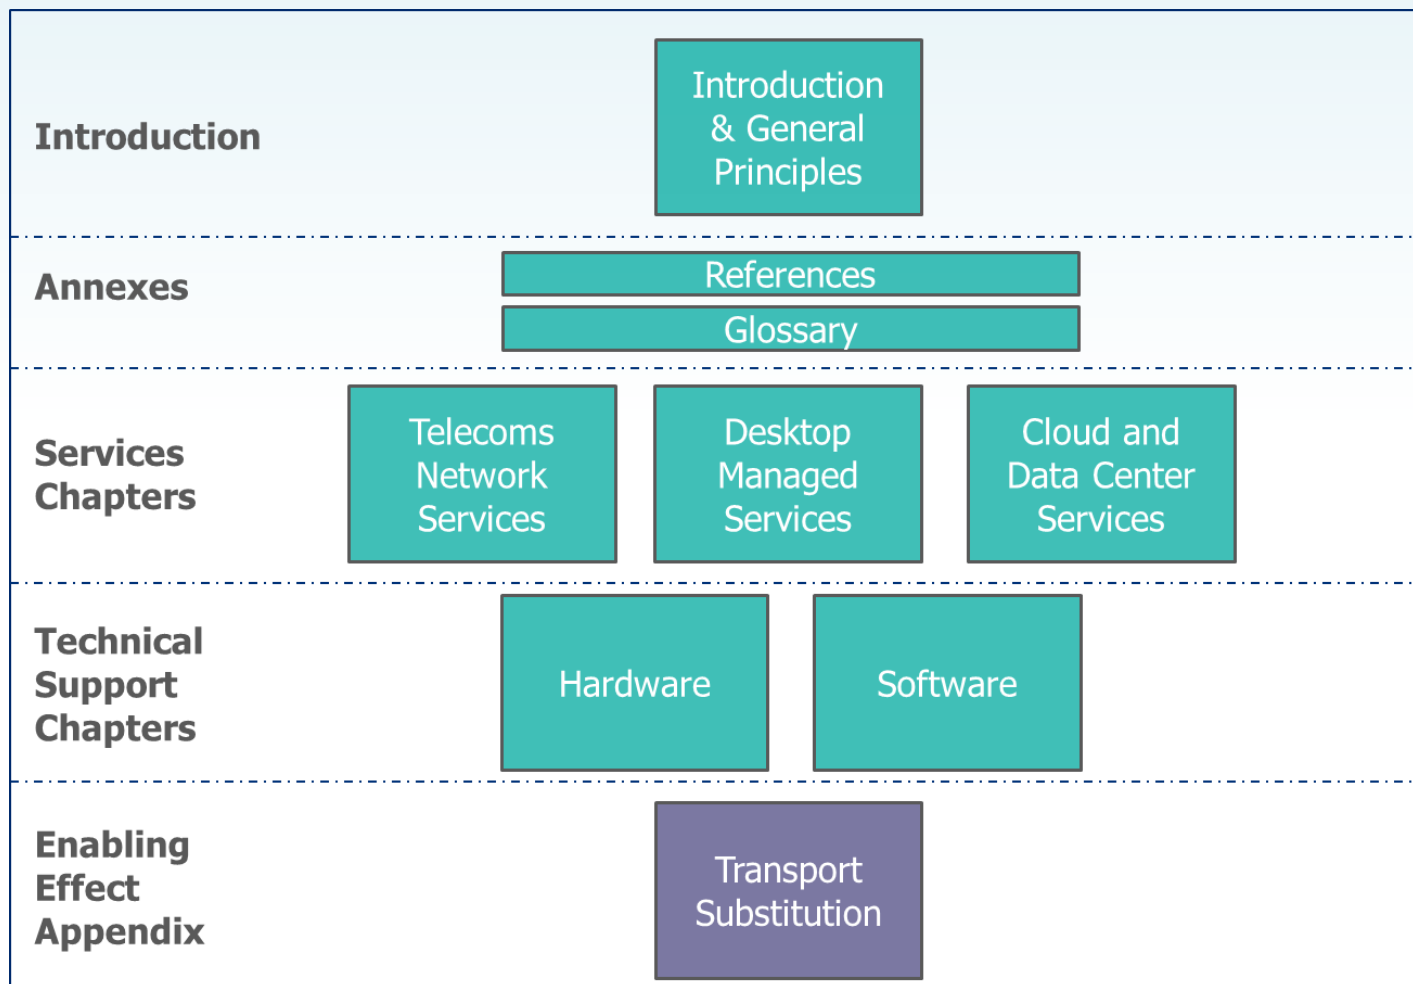

ICT Sector Guidance

- Built on the GHG Protocol Product Standard
- Guidance for assessing the life cycle GHG emissions of ICT products (goods and services)
- Focus on ICT Services
- “Practitioners Guide”
 - by practitioners for practitioners

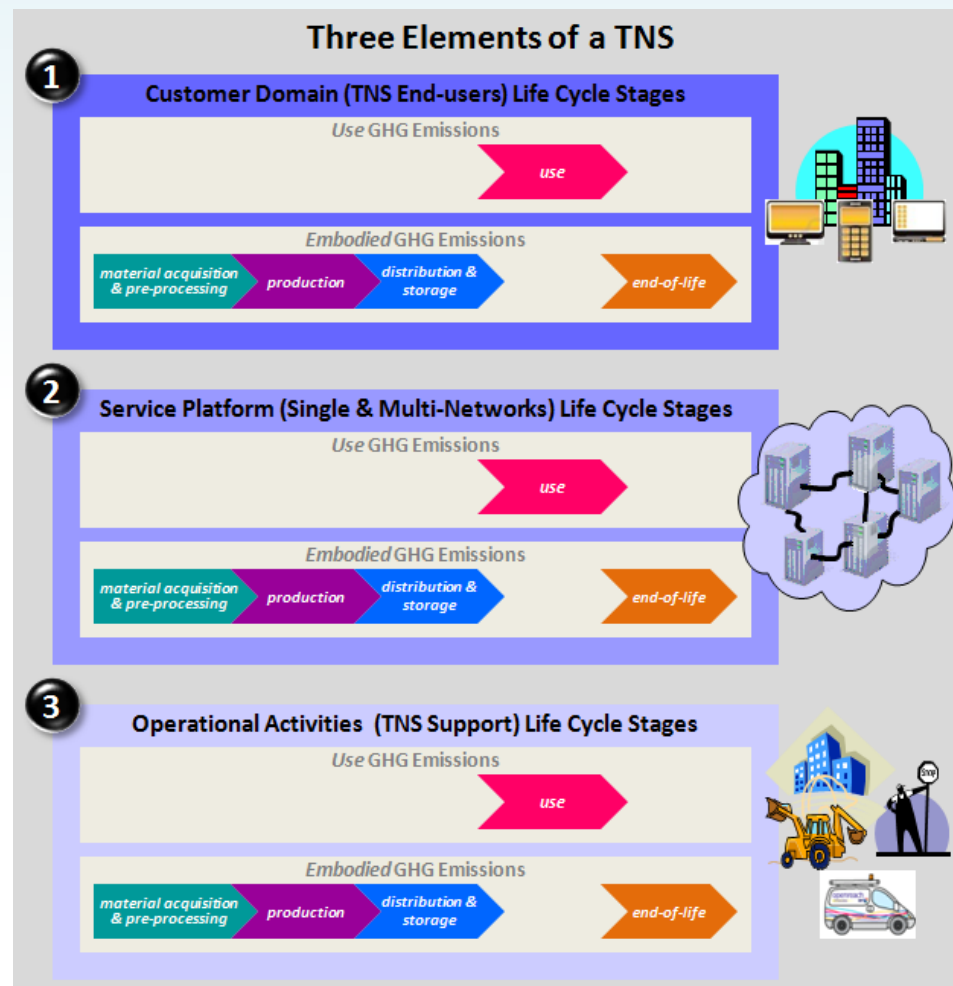

ICT Sector Guidance – Structure and Scope

Telecommunications Network Services (TNS)

- Assessment divided into three elements:
 - Customer domain (CPE)
 - Service Platform (the network)
 - Operational Activities

TNS Boundary

- Customer domain
 - ICT equipment required for the TNS deployed at the customer premises
 - Cooling and UPS equipment supporting this ICT equipment
 - End-user equipment (e.g. PCs and VC systems) that are part of the service provided

TNS Boundary

- Service platform
 - ICT network equipment used by the TNS provider to deliver the service
 - Cooling and UPS equipment supporting the network equipment
 - Electricity and other energy-related emissions associated with network equipment and infrastructure that are provided as part of the TNS

TNS Boundary

- Operational activities
 - People-related activities directly linked to the service (e.g. solution design, surveying, planning deployment / installation, maintenance, and technical support)
 - Dedicated nontechnical support such as product management, sales, and marketing
 - Activities associated with decommissioning of ICT equipment

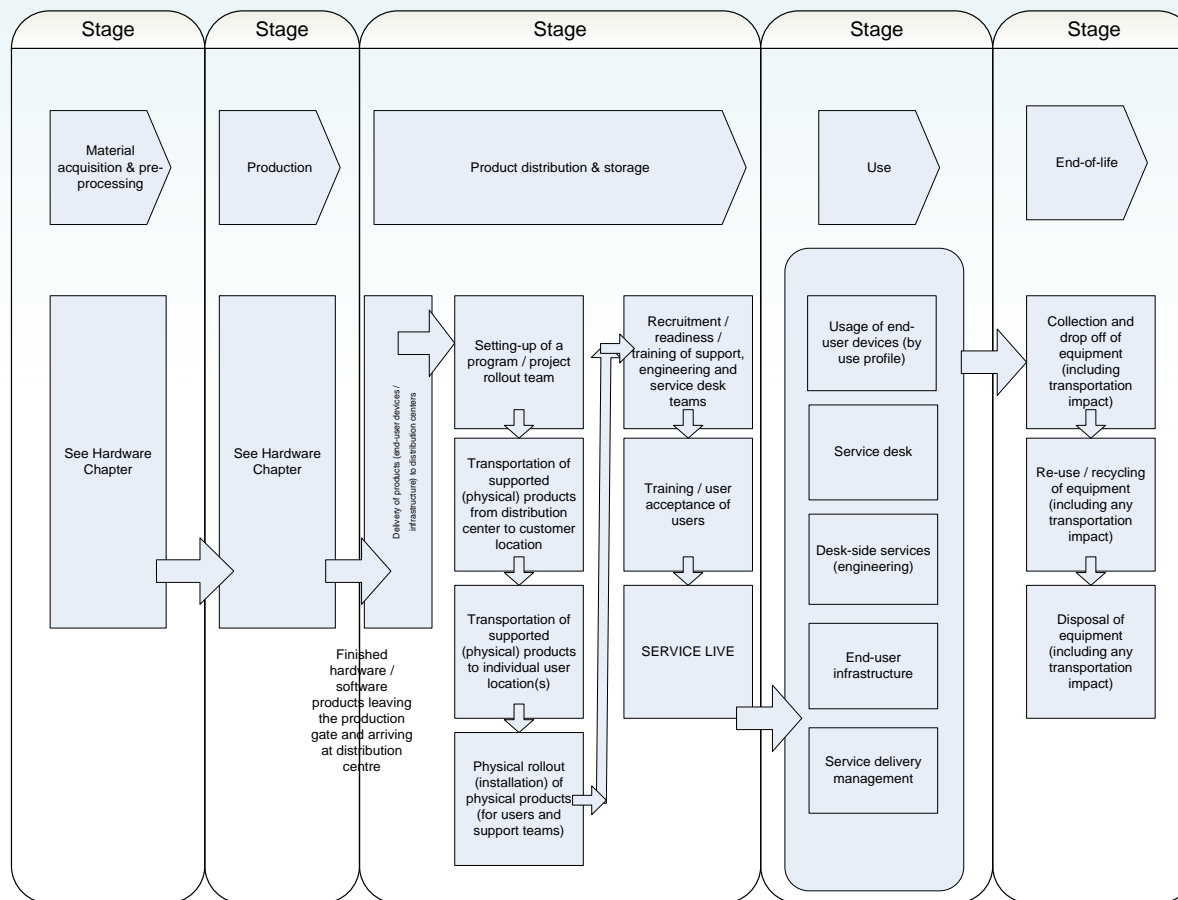

Desk Top Managed Services (DMS)

DMS components:

DMS process map

DMS guidance

- The DMS chapter provides guidance on:
 - Establishing the scope
 - Defining the functional unit
 - Boundary setting
 - Allocation
 - Data collection
 - Calculating emissions
- And provides a worked example

Cloud and Data Center Services

Scope and boundary for cloud services:

Data Centers

Network

End User Devices

Cloud and Data Center Services

Calculating emissions:

- Data Center emissions
 - Capturing all DC emissions (include DC overheads)
 - Fixed and variable emissions
 - Allocation to IT equipment and to cloud services
- Network emissions
 - Emissions per GByte data transferred
- End-user device emissions
 - In-use and embodied emissions
 - Allocating end-user device emissions

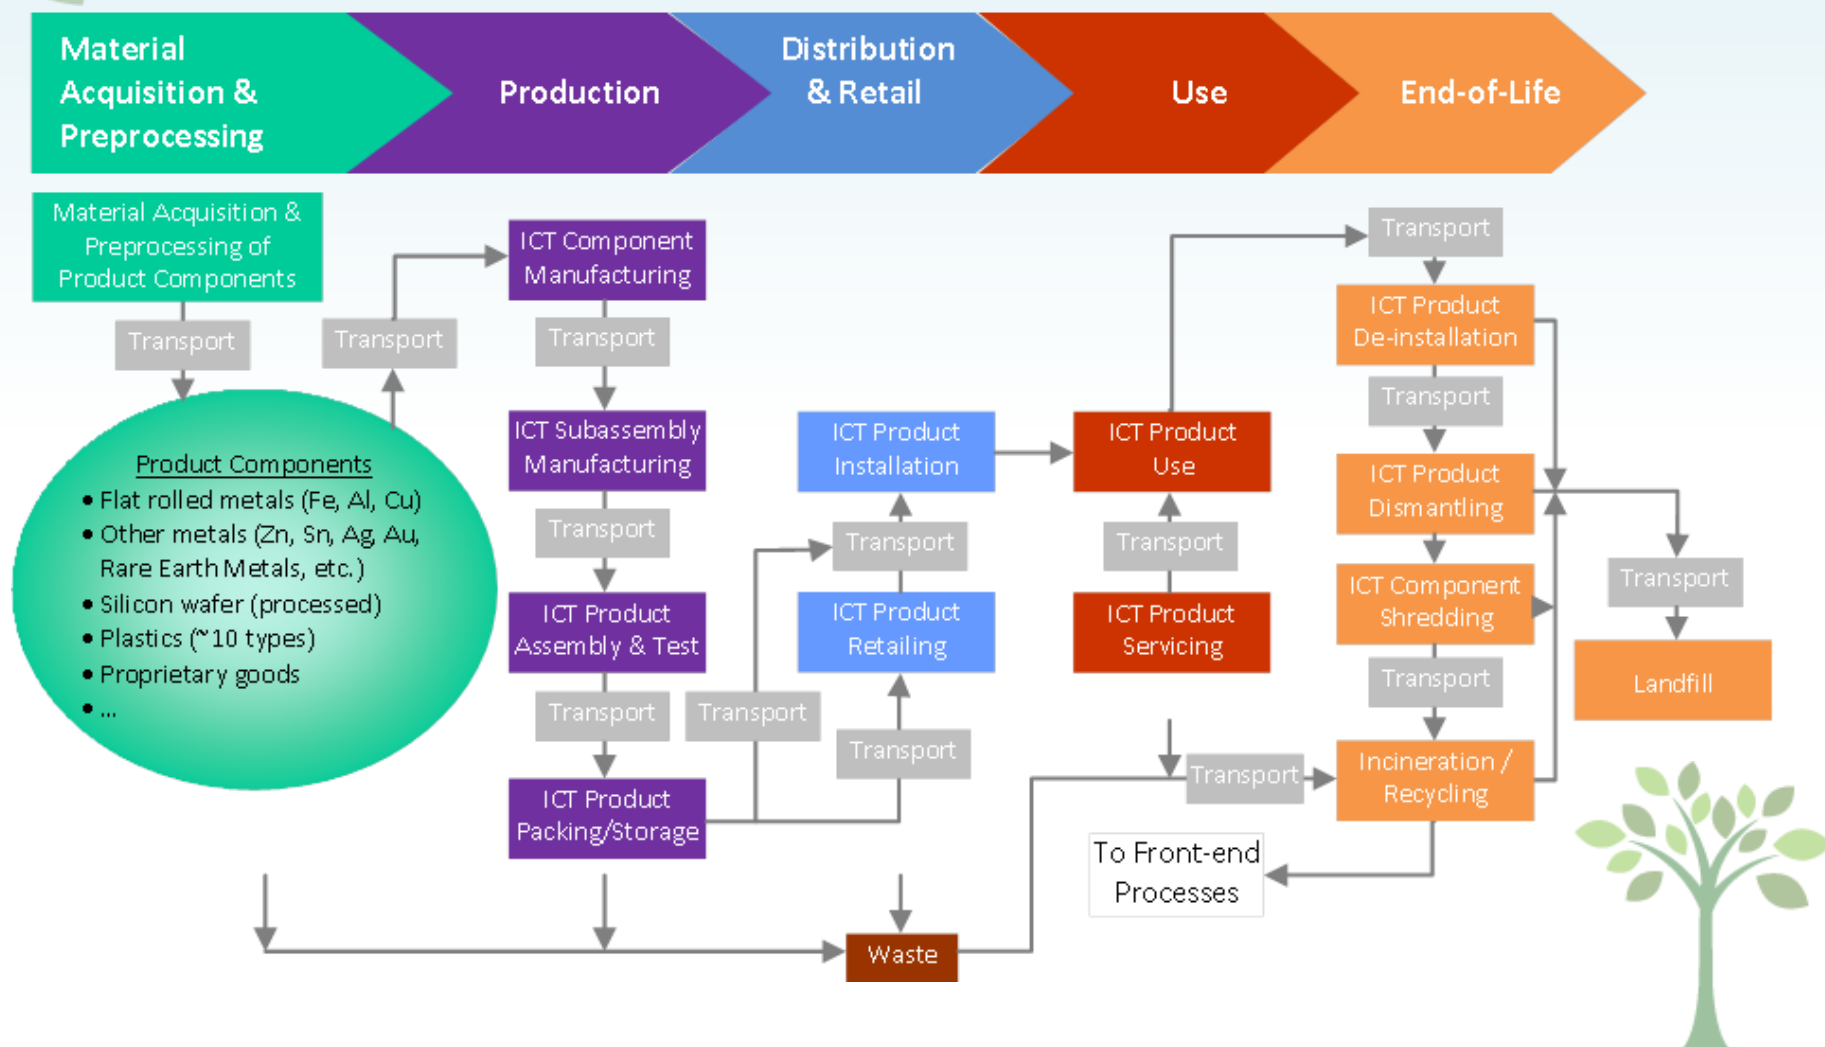

Hardware

- Support for the service chapters
- Provides different calculation approaches (depending on context and data availability)
 - Component characterization
 - Hardware parameterization
 - Life cycle stage ratio profiling
 - Environmentally extended input-output (EEIO)

Hardware – example process map

Hardware – calculation approaches

Approach	Summary	Notes
Component Characterization	Uses commonality in components to estimate emissions.	EXAMPLE: for PWB, use characteristics of the PWB (e.g. area, layers, component attachment, surface finish).
Hardware parameterization	Mapping of high-impact activities to product attributes. Use commonality in hardware type to estimate emissions.	EXAMPLE: for a laptop, use parameters such as: screen size, processor type, hard drive capacity, number of battery cells.
Life cycle stage ratio profiling	Calculate embodied emissions based on use stage emissions multiplied by life cycle stage ratio.	Provides a high level screening estimate of the ICT hardware emissions.
EEIO	Identify product or component monetary value. Multiply value by EEIO factor to calculate emissions.	Provides a high level estimate of emissions. May also be used for specific materials and components.

Software

- Part A – High level guidance for calculating full life cycle emissions of software
- Part B – Detailed guidance for measuring the energy consumed by software during its use stage

Software – Part A

- Part A – High level guidance for calculating full life cycle emissions of software
 - Simple allocation method,
 - or life cycle stage approach:

Material acquisition and pre-processing	e.g. software libraries and modules
Production	Software development and testing
Distribution and storage	Deployment, configuration, installation, training and user acceptance testing
Use	energy consumed by the software during its use
End of life	End of life of physical media

Software – Part B

- Part B – Detailed guidance for measuring the energy consumed by software during its use stage
- Measuring energy consumption of software
 - Operating Systems
 - Applications
 - Virtualization
- Attribution of energy to a task

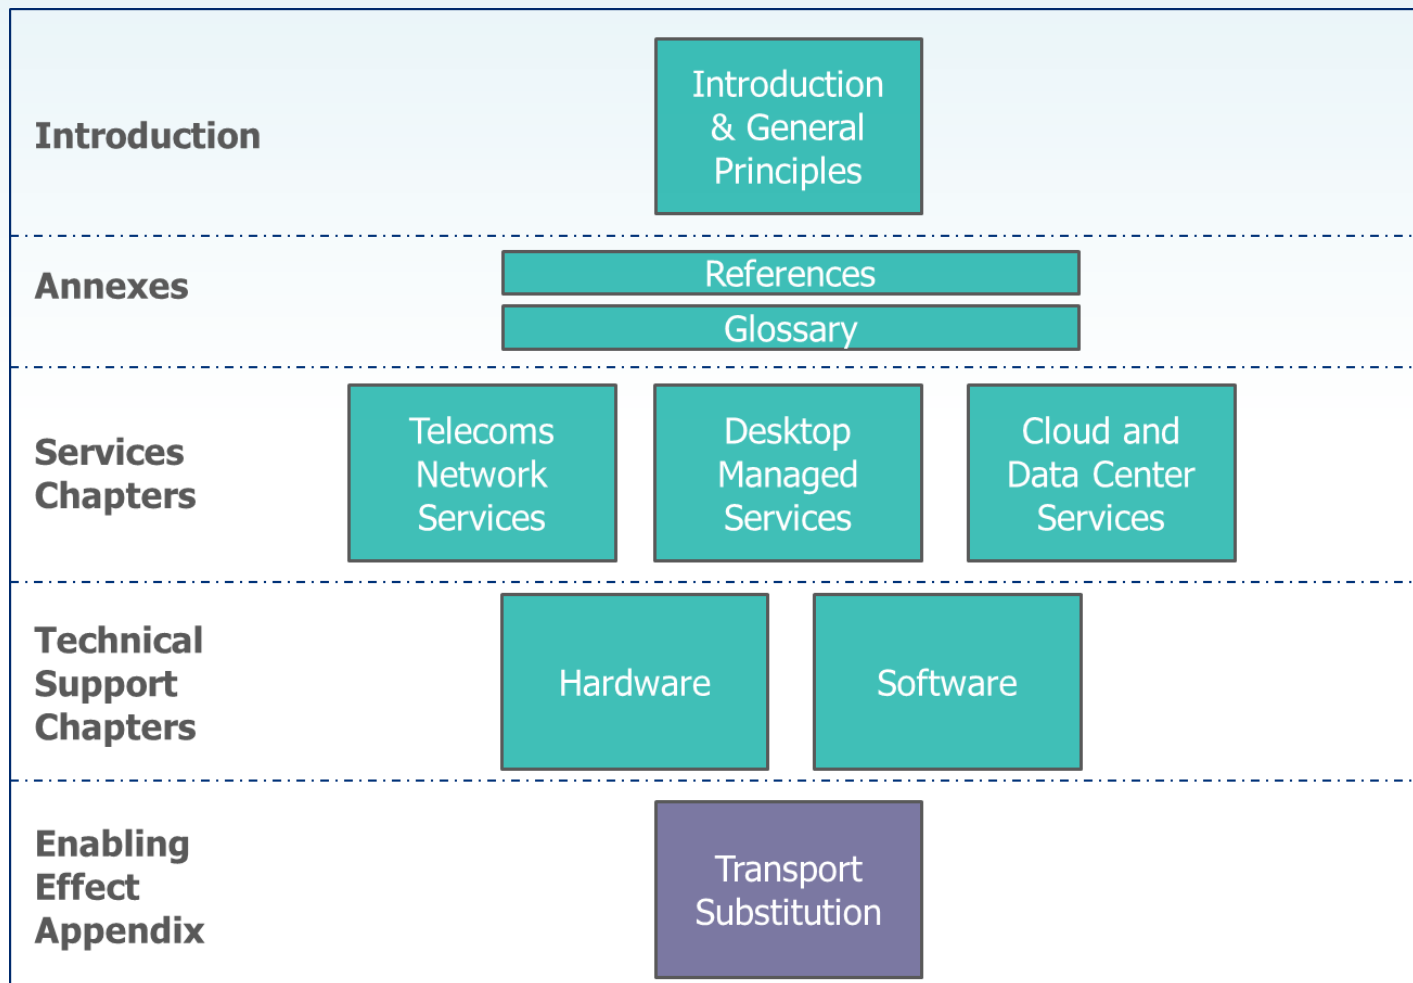

Development Process

- Initiative jointly convened by WRI, WBCSD, GeSI, Carbon Trust, and supported by 10 ICT companies
- Steering Committee representation: government, academia, standards organisations, ICT companies
- Technical Working Group of 60 members
- Stakeholder Advisory Group of over 200 participants, including representatives of 50 companies and 45 countries
- Two draft versions published
- With two formal public comment periods
- Over 700 comments were received
- Reviewed by WRI for conformance and consistency with the GHG Protocol Product Standard
- Final guidance document to be published next month

ICT Sector Guidance – Structure and Scope
