ICTFOOTPRINT EU

European Framework Initiative for Energy & Environmental Efficiency in the ICT Sector

Webinar: Green Policies, Green Labels and Virtualization Efficiency

In parternship with:

Thursday, 27th September 2018

Speakers

Matthieu Clavier

Coordinator

**Nantes City Lab Coordinator &
Nantes Métropole**

Thierry Leboucq

Chairman

GREENSPECTOR

Martin Dargent

CEO

EasyVirt

Silvana Muscella - Moderator

Founder & CEO

Trust-IT Services

The ICTFOOTPRINT.eu initiative, in a nutshell

Mission

Become “THE” consolidated effort that, at European level, raises awareness on metrics, methodologies & best practices in measuring the energy and environmental efficiency of the ICT-sector, to facilitate their broad deployment & uptake.

Partners

Deloitte.

Stakeholders

ICT Intensive SME

SDOs (Standard Development Organisations)

Cities & Public Administration

ICT Suppliers

Helping you choose your Low Carbon & Energy Efficiency in ICT

ICTFOOTPRINT.eu Results so far

5.000+ Community Members

26 ICT Sustainable Suppliers from 11 different countries

14 Advisory Group members from 7 different countries

5 languages helpdesk (EN, FR, DE, IT, ES)

1 Paper published in Scientific Event proceedings

1 user-friendly Self-Assessment Tool (SAT-O)

44 Success Stories on Green ICT

Map of ICT Standards with 20 factsheets

10 webinars with 28 different speakers & +400 registrations

Active Presence in 16 ICT & energy-aware events, plus visibility in 5 events

Consolidated community of 5,000+, through an effective marketplace, help desk, dynamic Map of ICT Standards, and communication & dissemination actions

Main Outputs for our stakeholders

ictfootprint.eu

Marketplace

Buyer: Find sustainable ICT suppliers & publish ICT sustainable needs.
Seller: publish ICT sustainable services or procurements & search for clients.

Webinars

Know more on sustainable ICT: get practical guides from a highly qualified experts in the Sustainable ICT sector and learn how to apply them in your organisation.

Help Desk In 5 languages

Get support about how to decrease your carbon footprint & implement ICT energy efficiency standards with Online Assistance (EN, FR, ES, DE, IT).

Success Stories

Best practices in Sustainable ICT. Search how players like you got energy savings & carbon footprint reduction. Or even showcase your success story!

SAT-S & SAT-O

Measure your own carbon footprint and start learning how to become sustainable thanks to ICT standards & methodologies.

Map of ICT Methodologies

20 downloadable fact-sheets of ICT methodologies & standards, understand & measure your ICT goods, services organisations & cities' carbon footprint.

Join us and get energy savings by choosing low carbon ICT

A Low Carbon ICT engaged community

Social Media followers, Newsletter subscribers,
Webinars registrations, Marketplace sellers &
buyers, Journalists, Synergies

★ > 5.300 members ★
ICTFOOTPRINT.eu COMMUNITY

ICTFOOTPRINT.eu Community 3.750 members

SMEs 53%

Large Enterprises 12%

Public Administration 5%

NPO 24%

SDO 0,6%

Media 2,20%

Academia & Research Centre 3,3%

Amongst the connections that count (multipliers/influencers)

10 webinars with reputable speakers

26 sustainable ICT sellers

How sustainable is your ICT company?

<https://ictfootprint.eu/en/services/self-assessment-tool-organisations>

SAT-O (for Organisations) – Free & simple tool to calculate the overall carbon footprint of your organisation

- ✔ Digital services provided & used by the organisation
- ✔ Structural impact of the building and personnel's
- ✔ Your own personalised report, with a light reading style, that shows the approximate climate change and primary energy footprint of your ICT-intensive organisation assessed over one year

Assess the ICT carbon footprint of your organisation, for sustainable ICT decisions

TRY “SAT-O” TOOL & MAKE INFORMED DECISIONS ON HOW TO MAKE YOUR ICT SUSTAINABLE & ENERGY EFFICIENT

Get to action! Joins us at ICT2018

What?

Networking session 4th December

Hall L5 – 17:00 to 17:45

Exhibition Stand from 4th to 6th December

Open all day

Who?

Public Authorities & cities, ICT companies, NGO on sustainability & ICT, Standard Development Organisations and and ICT

Key priorities, insights, networking, green tools, sustainable IT suppliers & further activities at our exhibition stand & networking session

REGISTER ON <https://ictfootprint.eu/user/register> TO GET OUR NEWSLETTERS

A lush green forest scene with a stream flowing over mossy rocks. Sunlight filters through the trees, creating a warm, golden glow. The stream is in the foreground, with water cascading over dark, moss-covered rocks. The background is filled with dense green foliage and tall trees.

Green IT roadmap at a glance

Ce regroupement de compétences est aujourd'hui unique en Europe et dans le monde. Son rayonnement est international comme en témoigne les visites récentes de délégations américaines, africaines et chinoises

Les possibilités de collaborations

Des collaborations entre Nantes Métropole et les acteurs locaux du Green IT peuvent être envisagées pour permettre à Nantes Métropole de renforcer son engagement dans une approche du numérique toujours plus respectueuse des ressources énergétiques. Nous proposons ci-dessous une liste d'actions opérationnelles :

Animation d'une stratégie GreenIT sur le territoire

- ACTION 1 Séminaire d'animation sur les bonnes pratiques existantes dans les communes de la Métropole
- ACTION 2 Opération collective d'audit énergétique des infrastructures informatiques pour l'ensemble des communes de la Métropole
- ACTION 3 Politique d'achats des services et matériels numérique « critériisée » sur l'axe Green IT

Bonnes pratiques pour les salles informatiques

- ACTION 4 Optimisation de la température de climatisation.
Gain attendu : les études estiment un gain de 4 % en énergie par degré (soit 20 % d'économie pour une température de consigne augmentée de 5° - ASHRAE)
- ACTION 5 Suivi des serveurs virtualisés : extinction systématique des serveurs inutilisés et rationalisation des machines virtuelles
Gain attendu : 20 W par serveur virtuel (soit 175 kWh par an et par serveur virtuel – source ADEME) plus les autres gains : non rachats de serveurs, baisse des coûts d'exploitation et des frais de licences.

Bonnes pratiques sur l'impression

- ACTION 6 Paramétrage par défaut (R/V – 2 par page)
Gain attendu : gain papier 20 %
- ACTION 7 Optimisation des modèles d'impression (polices économes en encre, suppression des aplats de couleur ou de gris, ...)
Gain attendu : gains sur les consommables d'impression (toner, cartouches)

Action sur les sources de consommation permanentes

- ACTION 8 Définition et déploiement d'une politique de mise en veille des postes de travail
Gain attendu : plus de 100 MWh sur Nantes Métropole – estimation suite à l'audit énergétique de 2013
- ACTION 9 Optimisation sur les équipements réseau et téléphonie sur IP (soit 25 % de la consommation de l'IT)
Gain attendu : 127 MWh sur Nantes Métropole – estimation suite à l'audit énergétique de 2013. Estimation d'un gain d'environ 20K€ sur la facture énergétique sur Sans pour St Herblain

Bonnes pratiques sur l'éco-conception

- ACTION 10 Audit d'éco-conception sur les applications – phases – telle que www.nantes.fr et www.nantesmetropole.fr
Gain attendu : Labelisation Green Code Label pour ces sites

Le Green Lab Centre à travers son réseau d'experts peut accompagner la Métropole sur toutes ces actions avec des expériences significatives de réalisation en entreprises et collectivités. Une convention pourra être réalisée entre la collectivité et l'association.

Green IT policy

Métropolitan area scale

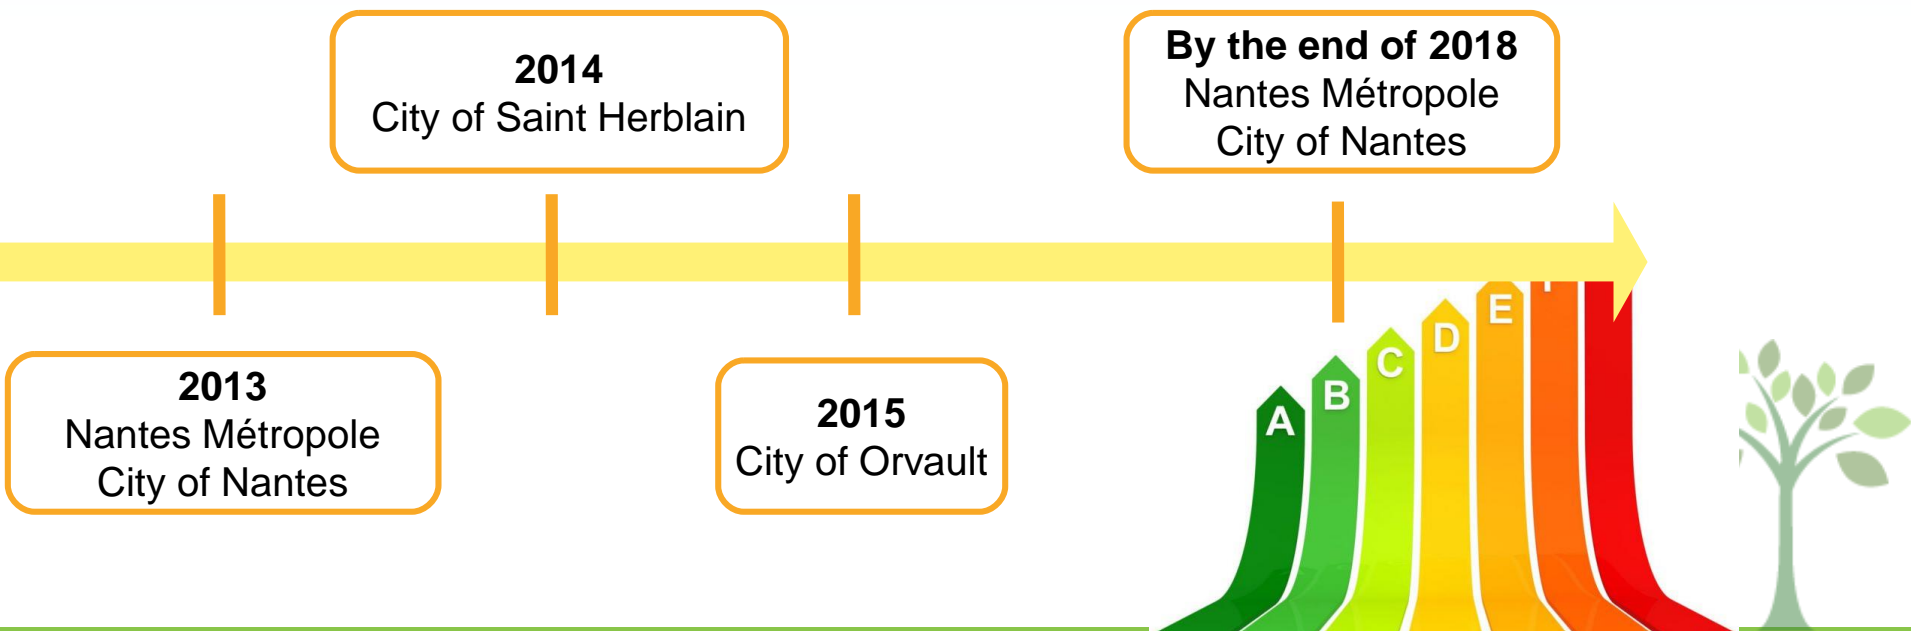

14 cities interested over sur 21 surveyed

IT Energy audit

sharing of good practices

Referencing of very low energy
workstation in 2015 for renewal

Potential in the collectivity **4 000**
workstations by 2020

**Average consumption of
workstations 350 000 kWh/y**

**Estimated savings
100 000 kWh/y**

8 w

Consumption divided by 3

Annual power consumption of workstations

Optimization of the air cooling temperature

Limit of this action : lack of measuring

2009

19°C

2015

23°C

?

27°C

Automatic extinction of unused virtual servers

More than 100 servers (over 700) are permanently shut down

With 10W by server, it represents about 9 000 kWh savings a year

Automatic printers/copiers configuration

Starting point

about 16 000 000 printings B&W
and color in 2015

92 % of printings are R/V

**Nearly 14 000
paper reams
saved**

Default standby policy over 5 000 workstations

Every workstation get to standby after 3 hours of inactivity

The IT energy audit revealed good practices of users

Eco energetic audit of the official mobile app of the city

Activation Cellule radio

Burst: groupe de trames réseau

DCH: Cellule radio active mais non utilisée

Eco software design

Setting up an eco-conception process for the labeling of a website dedicated to a major citizen debate dedicated to the energetic transition

Keep on going ...

- Green IT culture
- Further projects
 - New IT energy audit
 - Experimentation of digital boilers
 - Continuous measures and dynamic dashboard
 - Energy issues of cloud solutions
 - Permanent power consumptions of network infrastructure

Above all, keep pragmatic, with realistic, measurable objectives ... and measure

Thank you for your attention

GREEN CODE LAB

Green Code Lab is a French community to act in digital services ecodesign

- Actions to sensibelize digital actors :

Green Patterns book

Webenergyarchive project

Greencodelab challenge

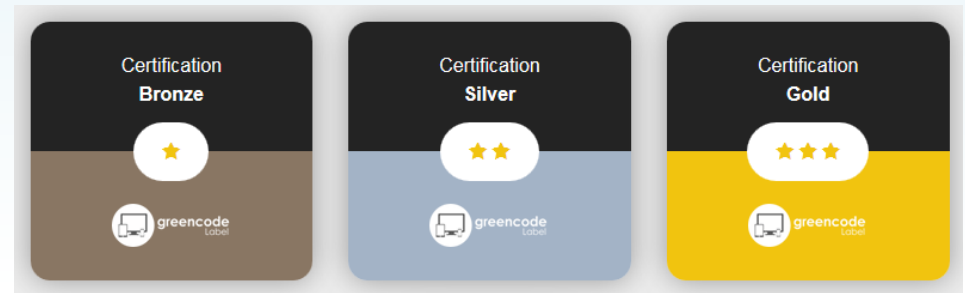

ict4s.org

Greencodelab challenge

A FRENCH LABEL FOR A SUSTAINABLE WEB

To engage organizations in action and communication for sustainable Web

GREEN CODE LABEL – BIG PICTURE

- **A repository of Green rules :** public,
- **A self-assessment** Excel spreadsheet
- **Preparation** accredited consultant
- **An « independant » exam** by Green Code Lab, 5 web pages
- **A Label** for 2 years, for a website, 3 levels

GREEN CODE LABEL – PERIMETER

- Effectiveness of the "server code"
- "low" use of databases
- Optimization of network transfers
- Effectiveness of the "customer code" Resource consumption
- Relevance and sobriety of presentation of the content (without obligation of austerity)

GREEN CODE LABEL – RULES REPOSITORY

The repository contains criteria of means and criteria of results

- 32 criteria of means covering the entire process
- 2 criteria of results via Webenergyarchive.com

GREEN CODE LABEL - RULE

Criteria 22 (Client part)

**Stop processing if the user no longer views the page
(Minimization, idle ...)**

GREEN CODE LABEL - RULE

Criteria10 (Content)

Optimize images and adapt images to the user platform

GREEN CODE LABEL – REAL MEASURE

Criteria 31 (Energy)

Consumption of Home page on client side

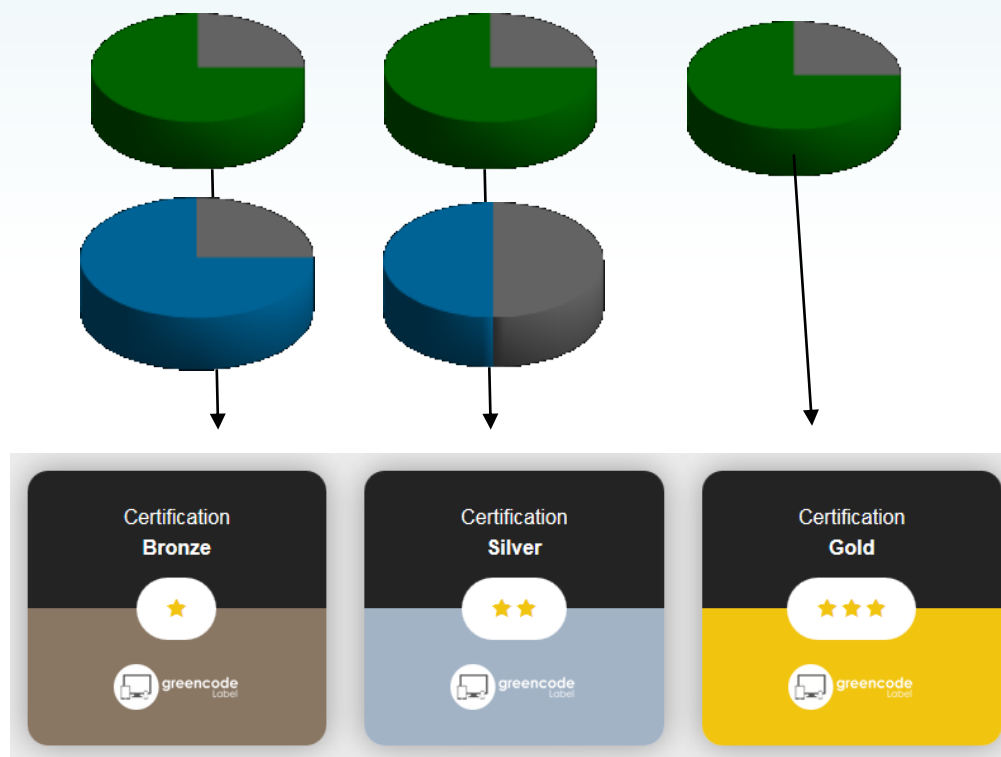

- Label A : 2 points
- Label B : 1 point
- Label C : 0 point
- > Label C : Eliminating criteria

GREEN CODE LABEL – LEVELS

Rules level 1>

Rules level 2>

A label for a commitment

DÉBAT

LA TRANSITION ÉNERGÉTIQUE
J'EXPLORE

LE DÉBAT
JE COMPRENDS

LES CONTRIBUTIONS
DES CITOYENS

12 ACCÉLÉRATIONS - 60 ACTIONS POUR UNE
MÉTROPOLE EN TRANSITION

Le rapport de la Commission est en ligne

NANTES METROPOLE – FIRST ASSESSMENT

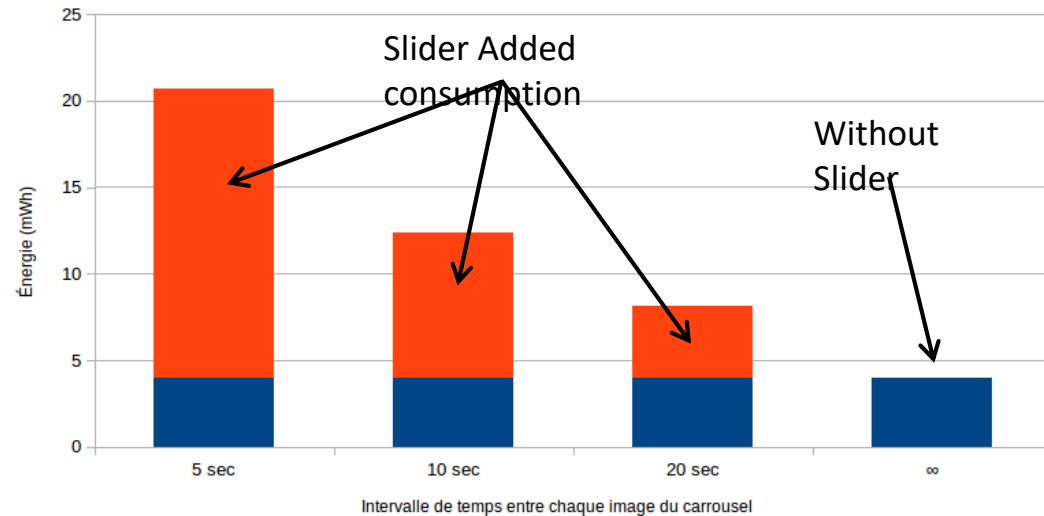

- Website : <https://www.nantestransitionenergetique.fr/>
- Website developped with an external Digital Partner
- First Evaluation : near Silver
- Level but **F label** in Energy

NANTES METROPOLE – WORKING TIME ...

Removing Image Slider
reduces Energy
Consumption by 80%.

NANTES METROPOLE – GOLD LABEL

- Decision to target Gold Level
- Decision by Business owner to replace image slider by a changing image to obtain A-Label for Energy Consumption
- Budget for improvement accepted (couple of days)
- GOLD LABEL !

NANTES METROPOLE - INTEGRATION IN PROCESS

- Repository used in another website, Musée des beaux Arts Website, label exam not yet taken
- Since 2 months, NANTES METROPOLE decided within Digital Partner Public Contract to Measure energy consumption all along conception phases with Greenspector Cloud Solution

GREEN HAPPY END !

**PhD Frederico
Alvares**

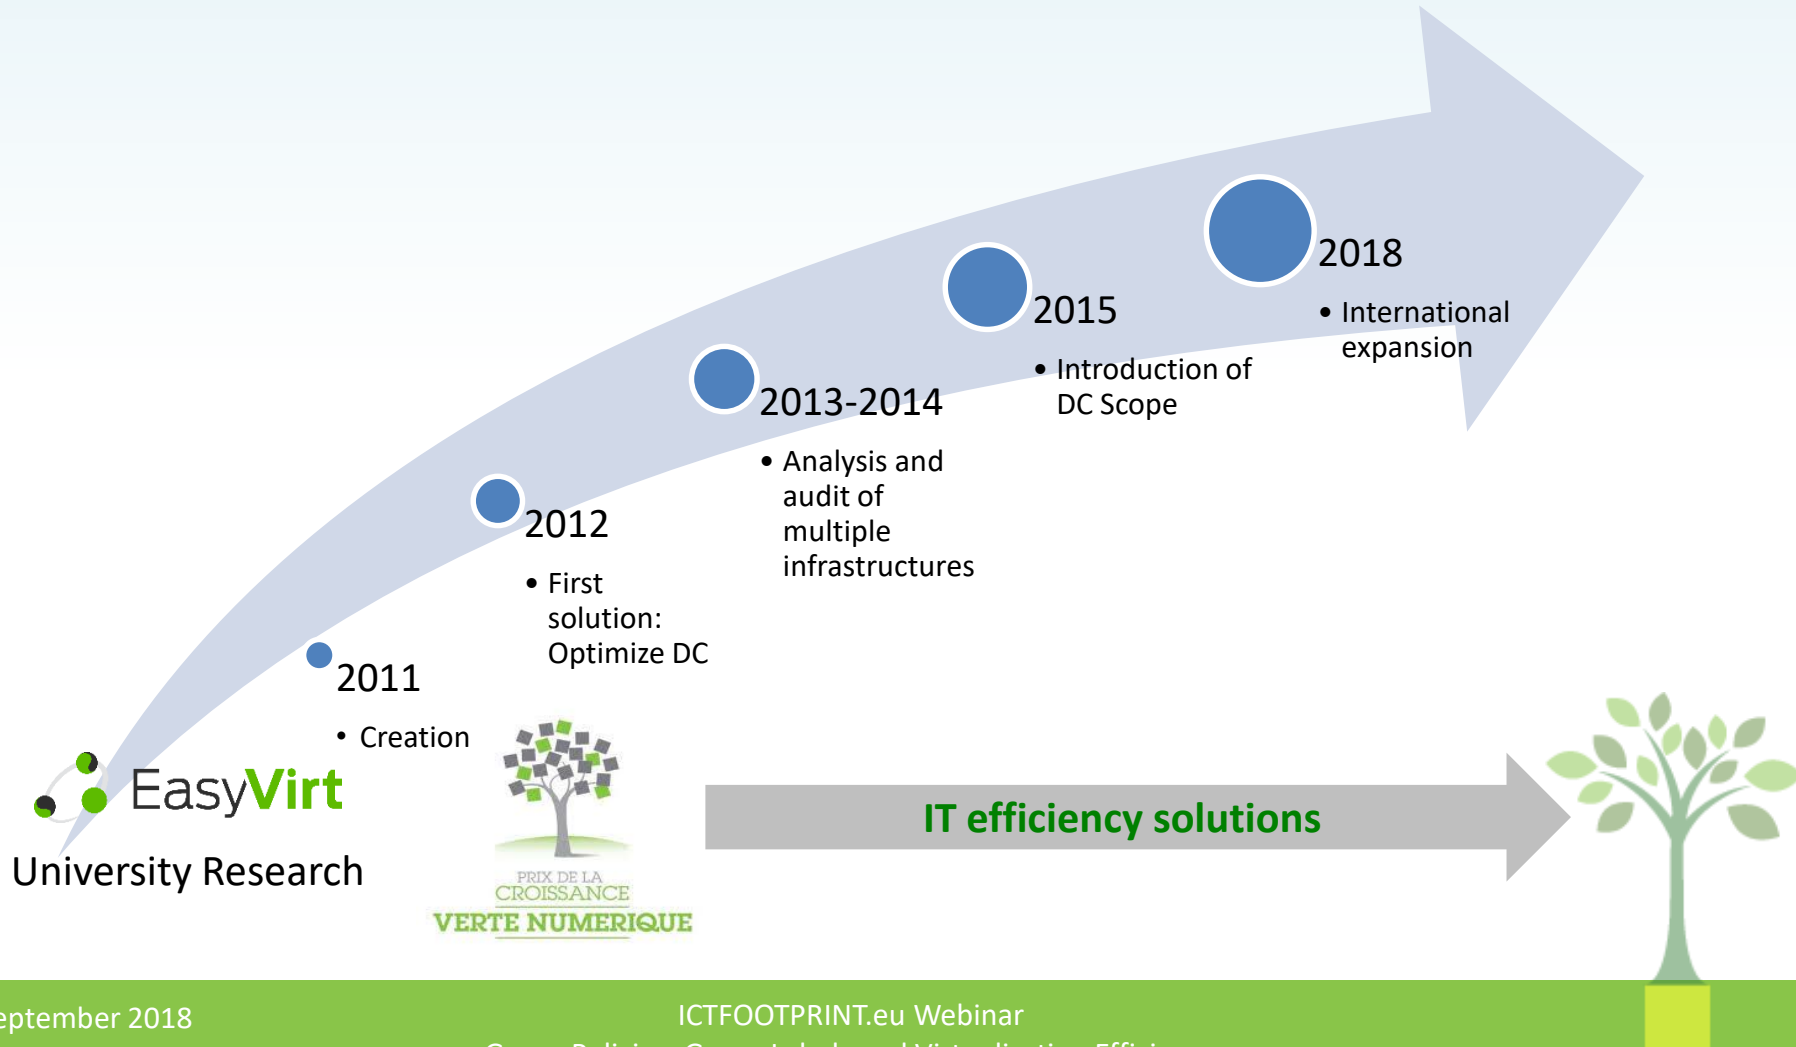

**Bertrand
Caron**

**Juan
Osorio**

Easyvirt - History

Our objective

To bring precise solutions that allow organizations to reduce environmental impact in their IT systems

How?

Targeting IT infrastructures = VIRTUALIZATION

Why? ---->

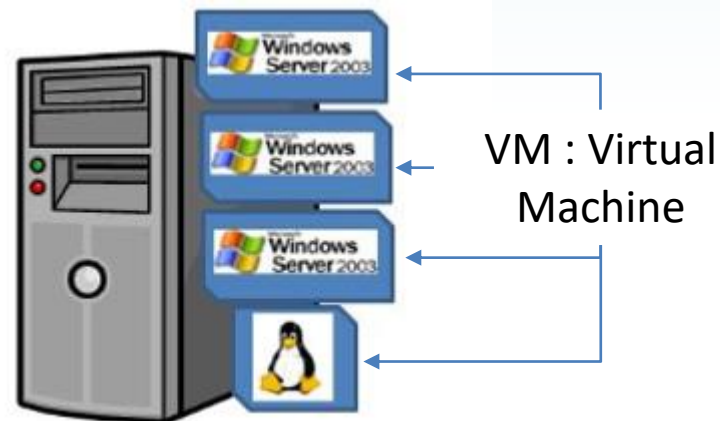

First of all : **virtualization** is good for environment

Before virtualization

After virtualization

Virtualization allows one physical server to replace several servers...

Virtualization is good for environment, but...

Less physical servers = less energy ...

But now we notice a rebound effect

Multiplication of VM

VMs are practical and easy to install...

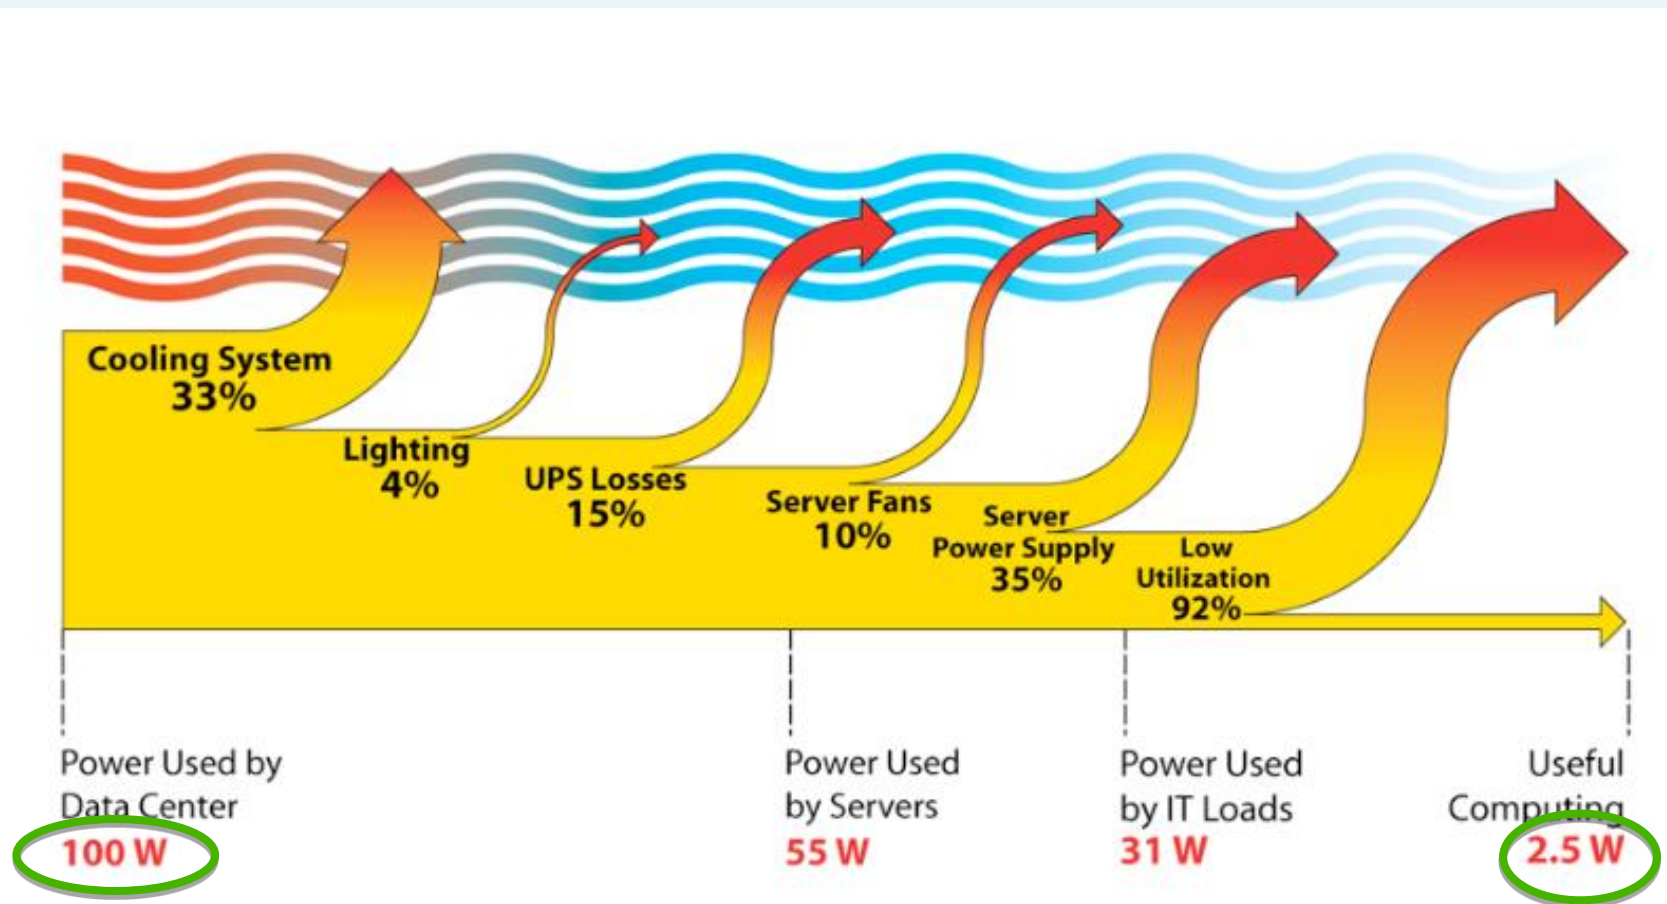

Organizations deployed a lot of VMs

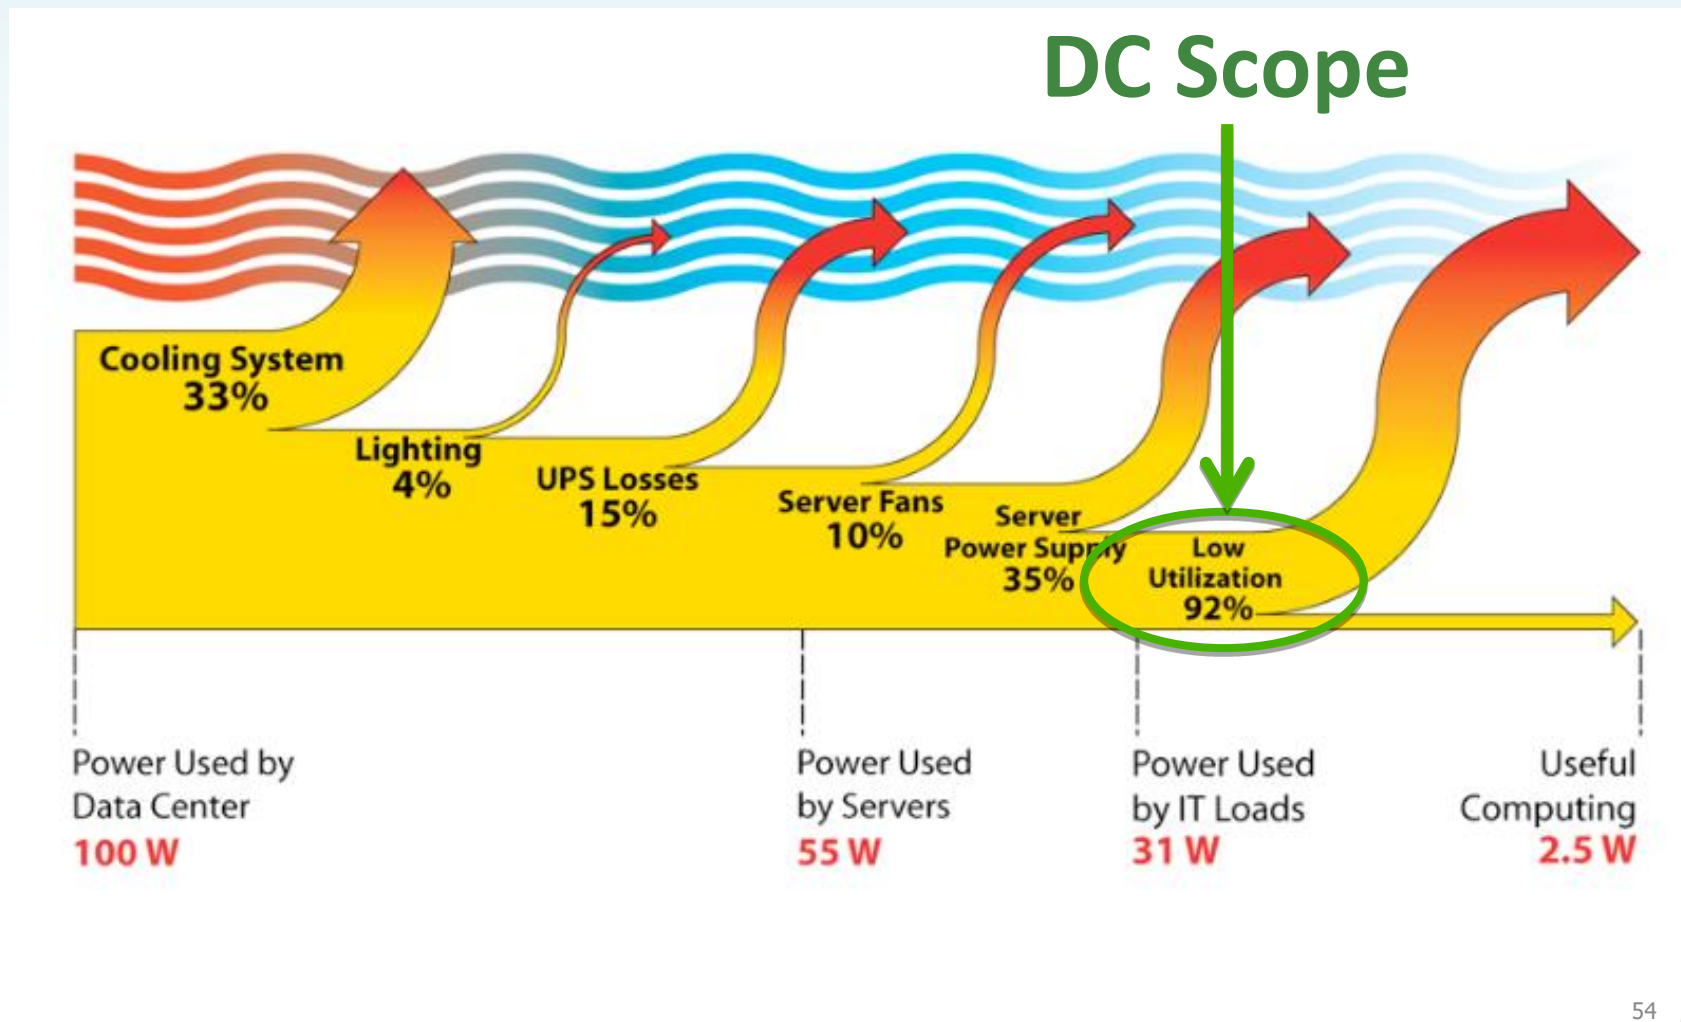

They have to buy new physical servers to bear the huge amount of VMs

Cascade effect in a server

DC Scope optimize the server utilization

Findings

● A lot of waste...or room for improvements...

● VMs unused (10%)

● VMs oversized (80%)

● no optimization of the use of VMs

● CTO don't have capacity planning tools so they tend to buy servers to avoid risks.

**This mismanagement results in
underutilization of physical servers and
waste of resources**

WHAT HAVE WE DONE?

- Our first software Optimize DC (2011)
 - This solution was an orchestrator for DataCenter,
 - Optimize DC: optimizes the Virtual Machine placement in a way to switch on the minimum of physical servers
 - This solution was hard to sell, because CIOs don't want to take risk to reduce electricity consumption ...
- Then we developed **DC Scope**[®]
 - The current finding is that virtualized IT infrastructures are generally poorly managed.
 - DC Scope makes it easy to control and optimize virtualized infrastructure and be efficient; more efficiency is less waste at the sources (see diagram cascade effect).

DC Scope to optimize and easily manage virtualization

1

Monitoring

2

Troubleshooting

3

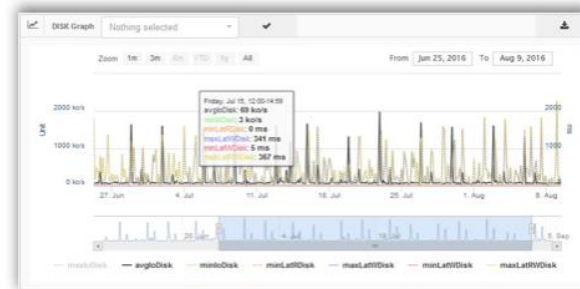

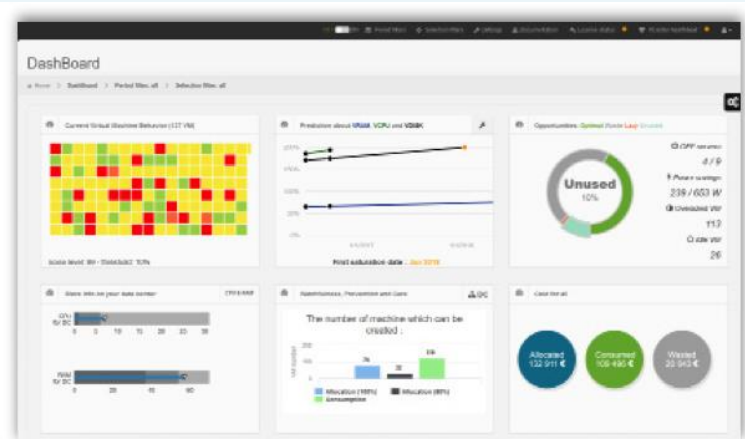

Capacity Planning

4

Optimization

5

Cost analysis
Public and Private Cloud

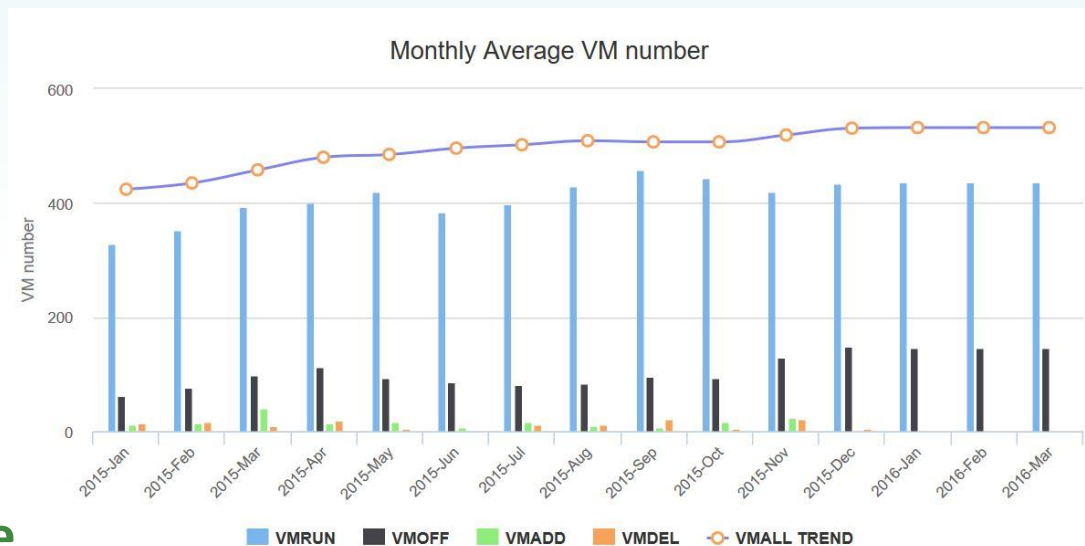

QUESTIONS ?

DC Scope[®] provide the answer

- Justify your investments
- Control your costs
- Easily simulate your PCA
- Optimise your infrastructure
- Edit key indicators and dashboards

Recognition in the French market by influencers, experts ...

Easyvirt dans la sélection des 21 start-up
qui œuvrent pour l'environnement

Easyvirt DCscope, un Nantais à l'assaut de vRealize Operations !

Posted on 3 octobre 2016

Easyvirt : le green IT passe par l'efficacité du SI - Le Mag numérique

Focus sur la startup nantaise Easyvirt, spécialisée dans le Green IT et la maîtrise de la virtualisation des systèmes d'information.

lemag-numerique.com

Persistent situation

The virtualized infrastructure support the informatic systems...
but it is not really managed

SHORT ANTICIPATION

LACK OF TIME

OVERLOADED RESOURCES

**UNKNWON ADAPTED
SOLUTIONS ...**

A real demand from management and IT teams

- Search for efficiency, cost optimization, rationalization
- Need visibility / indicators
- Need of decision making tools
 - Validation of BCP / DRP
 - What about moving to the cloud ...

Lack of control over virtualization

Thus

- Waste of time
 - Managing unnecessary virtual machines (VMs)
 - Difficulties of reliable dashboards
 - Communication problems between teams
- Increase of risks
 - Management by rule of thumb
 - Making decisions on unreliable data...
- Significant waste
 - VM and storage
 - Purchase of unnecessary servers

DC Scope[®]

Zero obstacle & Zero constraints

Simple installation : **15 minutes to install**

Getting started : **Hyper fast**

Not a setup process: **2 clicks**

Complete solution: **functionalities developed in collaboration with our customers.**

Our differences

- Intuitive and quickly
 - Quickly to install solution an immediate use (no setup process)
 - Intuitive and powerful application
- At the right cost 
- A solution recognized by stakeholders in virtualization

Thank you for your attention

EasyVirt

THANK YOU!
